**GEOTECHNOLOGY, INC. PURCHASES
ADVANCE ENVIRONMENTAL ASSOCIATES, LLC**

On March 13, 2006, Geotechnology, Inc., a geotechnical and environmental engineering consulting firm, acquired the assets of Advance Environmental Associates, LLC, (AEA) a St. Louis environmental consulting firm that provides industry with environmental regulatory expertise.

“We are excited for a great team like AEA to join forces with us. Their specialized expertise will enhance our capabilities and will allow us to provide clients from both firms with more comprehensive services,” said Ed Alizadeh, president of Geotechnology.

AEA’s resources complement an already strong Geotechnology Environmental Group by assisting industrial clients with a variety of industrial needs that include initial permitting required to build or expand a facility to ongoing monitoring of emissions to meet federal and state regulations. AEA’s expertise includes air permitting and monitoring, environmental auditing and spill prevention planning.

AEA’s staff of five will form a new Compliance Section within Geotechnology’s Environmental Group. The former CEO of AEA, Andrew Polcyn, will lead the section as Principal Engineer and lend his expertise to the entire Environmental Group. Polcyn is an environmental engineer who has been active in the area’s environmental community since 1969. He will also serve as a member of Geotechnology’s strategic planning committee.

“For the past ten years, I have enjoyed leading our small firm, but I was looking to grow AEA and take our capabilities to the next level. Joining Geotechnology is an even better fit than I anticipated and will allow us to learn from our new team, teach them about our specialties and provide all of our clients with a better package of services,” said Andrew Polcyn, former CEO of AEA.

AEA’s staff of five professionals will all join Geotechnology in the company’s headquarters office at 2258 Grissom Drive in Maryland Heights, Missouri. They will continue to provide AEA’s clients with quality and responsive environmental services from this new location.

Geotechnology, Inc., is a professional corporation offering a comprehensive range of consulting services in applied earth and environmental sciences, including geotechnical and environmental engineering, materials testing, geophysics and drilling. Geotechnology is headquartered in St. Louis, Missouri, and has offices in Collinsville, Illinois, and Overland Park, Kansas.
