FOR IMMEDIATE RELEASE

**GEOTECHNOLOGY MOVES TO NEW
COLLINSVILLE FACILITY**

ST. LOUIS (January 5, 2007) --- Geotechnology, Inc., a leading provider of consulting services in geotechnical and environmental engineering, materials testing and drilling, has relocated its Collinsville, Illinois office to a new facility at 907 North Bluff Rd., near Interstates 55/70 and 255.

The new, 2,500 square foot facility includes a laboratory that will allow Collinsville employees to perform materials testing at the Collinsville facility. Previously, employees transported materials for testing to the company's headquarters in St. Louis County.

"This move is a win-win situation for Geotechnology and our clients," said Dale Smith, Branch Manager. "The on-site laboratory will allow us to streamline our materials testing process, providing faster results for clients. And since our new office is located near numerous highways, we'll have quicker, easier access to our clients' offices and project sites."

Geotechnology, Inc., opened its first Collinsville office in 1997. The location currently supports five employees, but the company expects to increase that number in the coming year. Active projects include the flight line at Scott Air Force Base, the new viewing platform on the East St. Louis riverfront and the expansion of the raw water treatment plant at Rend Lake.

-more-

Geotechnology, Inc., is an employee-owned, professional corporation offering a comprehensive range of consulting services in applied earth and environmental sciences, including geotechnical and environmental engineering, materials testing, geophysics and drilling. Geotechnology has provided expertise on nearly every major construction project in the region, including the new Busch Stadium, Lambert Airport expansion and Pinnacle's "St. Louis City" Casino. Geotechnology, Inc. is based in St. Louis, Missouri and has offices in Collinsville, Illinois and Overland Park, Kansas. Geotechnology has 120 employees and recorded \$13.2 million in sales in 2005.
