Geotechnology, Inc. to Assess ‘Brownfields’ for East St. Louis Housing Authority

St. Louis, MO (Sept. 18, 2006) – Geotechnology, Inc., a leading provider of consulting services in applied earth and environmental sciences, has been selected by the East St. Louis Housing Authority (ESLHA) to help assess the redevelopment potential of brownfield sites located on the banks of the Mississippi River.

Under the contract, Geotechnology will provide environmental engineering services in accordance with a U.S. Environmental Protection Agency (US EPA) Brownfields Assessment Grant. The agreement calls for Geotechnology to conduct Phase I Environmental Site Assessments, Phase II Environmental Site Assessments, asbestos surveys, remedial action plans, remediation cost estimates and site re-use plans for the ESLHA. The company will partner with Afram Corporation, Athens Design, Inc., David Mason & Associates and Schneider Laboratories to provide engineering, drafting, surveying and analytical testing services in connection with the project. The assessment process is expected to take 18 to 24 months.

“We’re excited to be a part of East St. Louis’s riverfront redevelopment project,” said Rick Pershall, Vice President of Geotechnology. “We look forward to using our extensive experience and resources to help East St. Louis come up with cost-effective environmental solutions for the sites covered by the grant.”

Geotechnology, Inc. is a professional corporation that offers a comprehensive range of consulting services in applied earth and environmental sciences, including geotechnical and environmental engineering, materials testing, geophysics and drilling. Geotechnology is headquartered in Maryland Heights, Missouri and has offices in Collinsville, Illinois and Overland Park, Kansas.
